

## DD-200 Dolphin Detector

- DD-200 Dolphin Detector is instrument to search and detect for dolphin sound in ocean. Considering dolphins use a variety of sounds for communication and navigation with a wide frequency band, this detector transforming dolphin sounds into audible signal using heterodyne method.

SPECIFICATION	
Frequency Range	5kHz~220kHz
Amplifier Gain	30~50dB
Local Oscillator Frequency	60kHz
Input Device	PZT Ceramic Hydrophone
Output Device	Built-in Speaker / headphone
Battery Size	AA Batteries × 4
