

ST0501 Transducer

- The ST0501 transducer offers flat receiving response from low frequency to 50kHz. It can be used for acoustic measurement, and very useful to underwater environment research. ST0501 can also be used as a projector.

SPECIFICATION	
Frequency Range	~50kHz
Transmitting Sensitivity	132dB re 1 μ Pa/V at 1m at 50kHz
Receiving Sensitivity	-207dB re 1V/ μ Pa
Operating Depth	50m
Nominal Capacitance	14500pF

- OUTLINE DIMENSIONS
